AVS adaptors allow you to make almost any bag, basket, or crate compatible with AVS carriers and NEWRACK interfaces. Please use this drilling template for a smoother and more accurate installation.

### After installation:

- Make sure that all screws are tightly secured.
- Be mindful that a bag, basket, or crate can affect the maneuverability of the bicycle.
- Distribute any added weight evenly across the bicycle.
- Test your bicycle in a closed-off area with no traffic before using it in public.
- Inspect that no lights or reflectors are covered or obscured.

This AVS adaptor has a maximum carrying capacity of 15 kg. Under no circumstances shall any individual or animal be transported using this adaptor. Modifications are prohibited as they can damage the integrity, safety, and function of the AVS adaptor.
